

AhlCleaner TC133 Efficient removal of small debris

AhlCleaner TC133 Efficient removal of small debris

The ANDRITZ AhlCleaner TC133 is highly efficient in removing small impurities from stock. It combines two independently operating cleaners with common feed and accept chambers.

The TC133 consumes little power, due to the low-pressure drop design. Pressurized rejection of impurities prevents air from entering the accept and reject flows. Fiber losses in the cleaning operation can be

Benefits

- Durable plastic and ceramic cones
- Directions of feed and accept connections can be selected
- Minimum space requirements
- Easy to operate, maintain and install

reduced by using specially designed cones in latter stages of cleaning.

Durable plastic or ceramic cones endure high temperatures, chemicals and wear from impurities. The headers are made of stainless steel. Directions of feed and accept connections can be selected. The TC133 cleaners require minimal space due to modular design and compact construction. Two separate cleaner stages can be installed in the same header. The operation of an individual cleaner can be monitored through the sight glass. A wear indicator warns of excessive wear in a cleaner cone. A patented device unplugs the cleaner during operation.

No special tools are required to install the cleaners and wear parts can be replaced quick and easy.
