

ANDRITZ China

Stock testing laboratory

Stock testing laboratory in China

Professional checking of stock properties

Located in Foshan, Guangdong Province, China, the ANDRITZ Pulping and Fiber Division stock testing laboratory was built and put into operation in July 2013.

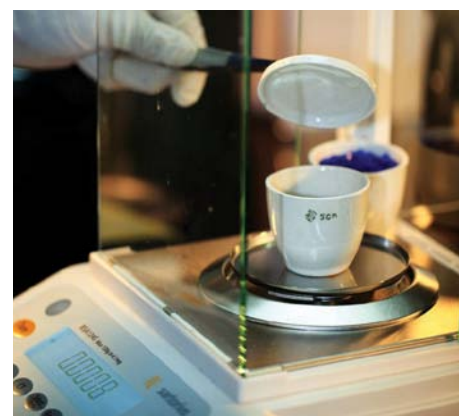

The lab is able to provide physical and chemical property tests for all types of stock. Our mission is to offer reliable and consistent laboratory test services to paper mill customers in Asia and to support start-up and commissioning, performance testing, and system optimization.

▲ Fast and accurate testing of pulp in a local state-of-the-art laboratory

Benefits
